

VidyoCloud™

Transform Team Collaboration

Business Challenge

Whether you call it telecommuting, work-shifting, flexible work or working-from-home, the way we work has permanently changed. Employees need effective interpersonal collaboration to meet strategic goals, and the lines of business are driving the demand for robust video collaboration tools.

As an IT manager, you may be looking to the cloud to rapidly deploy and scale video collaboration. But until now, you had to accept the status quo of mediocre quality as the trade-off for the flexibility, scale, and affordability that cloud delivery provides.

Rapidly deploy video collaboration without sacrificing quality.

Solution Overview

VidyoCloud empowers organizations to engage a remote workforce, connect highly mobile employees, and enable external B2B & B2C collaboration. For organizations that need high quality video conferencing and want to avoid burdening their IT staff and resources, VidyoCloud™ is a hosted video collaboration solution that provides the highest quality video experience in any network environment.

In fact, VidyoCloud delivers industry-leading performance at the extreme ends of the quality spectrum. In network challenged environments, like mobile and wireless, VidyoCloud offers unsurpassed error resiliency, and can even adapt to 20% packet loss – more than double the industry average. In robust network environments that leverage 4k and 5k displays, VidyoCloud delivers the most stunning quality imaginable, up to 16x better than the industry status quo 720p.

IT Benefits

- Easily deploy, scale, and support video collaboration initiatives
- Rely on dynamically optimized video and numerous points of presence around the world to provide the best performance for your remote and mobile users
- Meet enterprise security standards - TLS, SRTP, H.235, and AES 128-bit encryption
- Protect investments and support legacy third-party H.323 and SIP-based systems
- Drive adoption and utilization with end-user resources and programs
- Reduce capital costs with a predictable OpEx subscription model
- Save on expensive WAN bandwidth, with adaptive hybrid support (optional)
- Customize with affordable options that fit your organization's needs, like high capacity meeting rooms, recording, support for Microsoft Skype for Business and more

End-User Benefits

- Connect from any BYOD device (laptop, smartphone, tablet, or room system)
- Collaborate effortlessly with a consistent and intuitive experience across devices
- Host large multiparty conferences or call colleagues directly for ad hoc sessions
- Share content easily, and view content in a separate window or display
- Include voice-only dial in for standard phone users
- Meet externally - B2B and B2C guests can join meetings with a browser; no downloads or plug-ins required
- Always on the latest software version, so you have access to the latest features and tools as they become available

Features	Free	Team	Enterprise
